- Sugar cane production in Vietnam
- Typical farm in central highland region
- Farm economic analysis

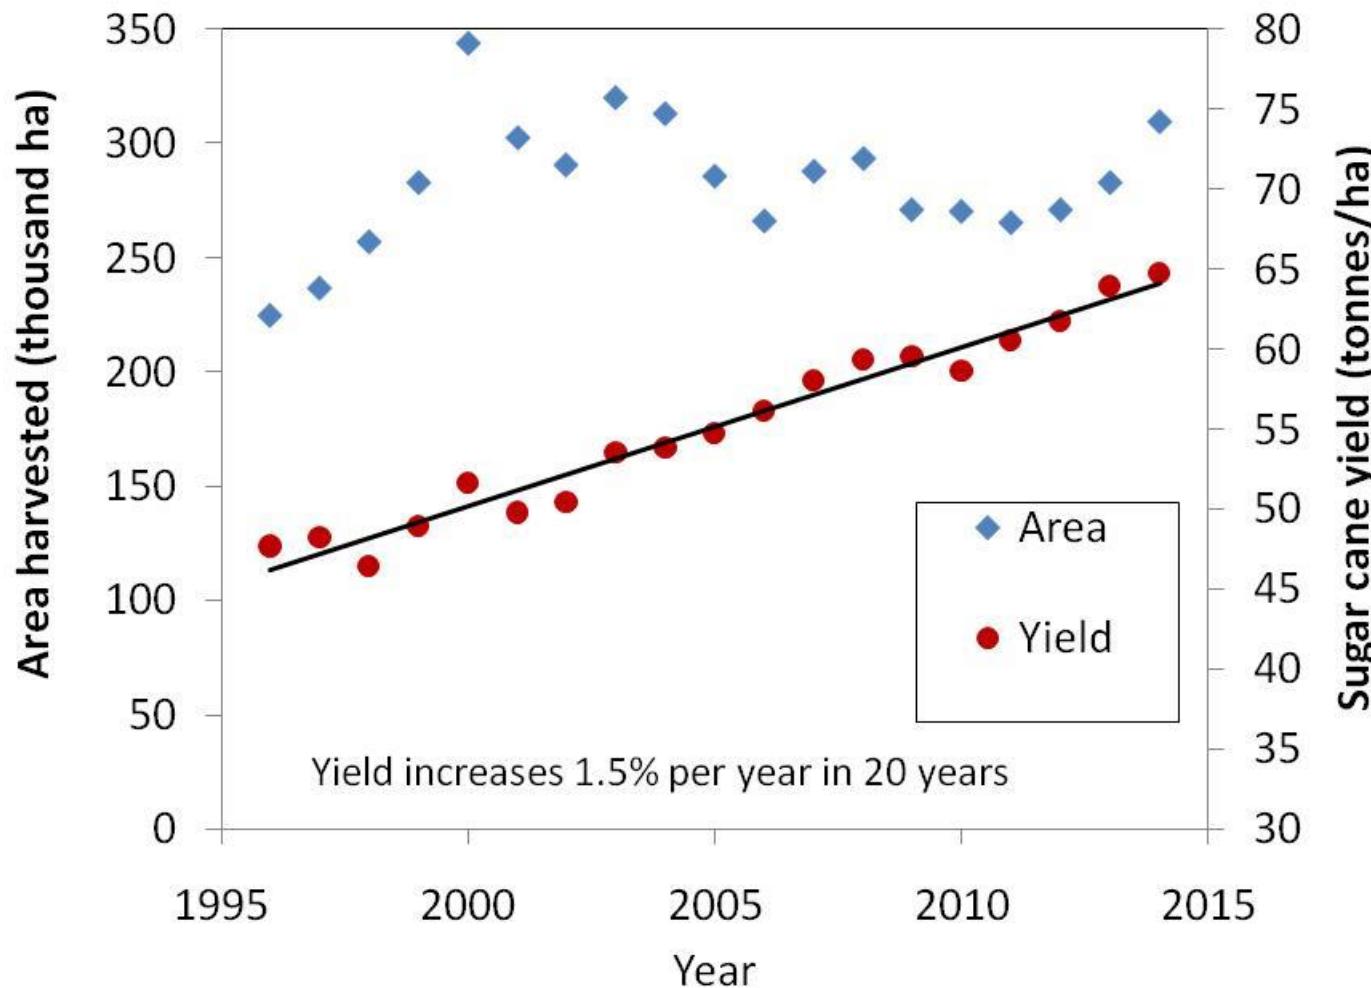

Overview of sugar industry in VN

- 41 mills
- Mill capacity: 140000 t cane/day
- Production area: 300000 ha
- Cane growers: 337000 families

Development of acreage & yield

Data source: MARD

Location of typical farm in central highland

An Khê county, Gia Lai province

Total cane area: 10000 ha

Farm size: 2 ha – 20 ha, fragmented

Plot size: 0,2 ha – 3 ha

hilly region, sandy loam soil

Rainy season: Nov. – Apr. (1800 mm/a)

Cropping system: sugar cane - cassava

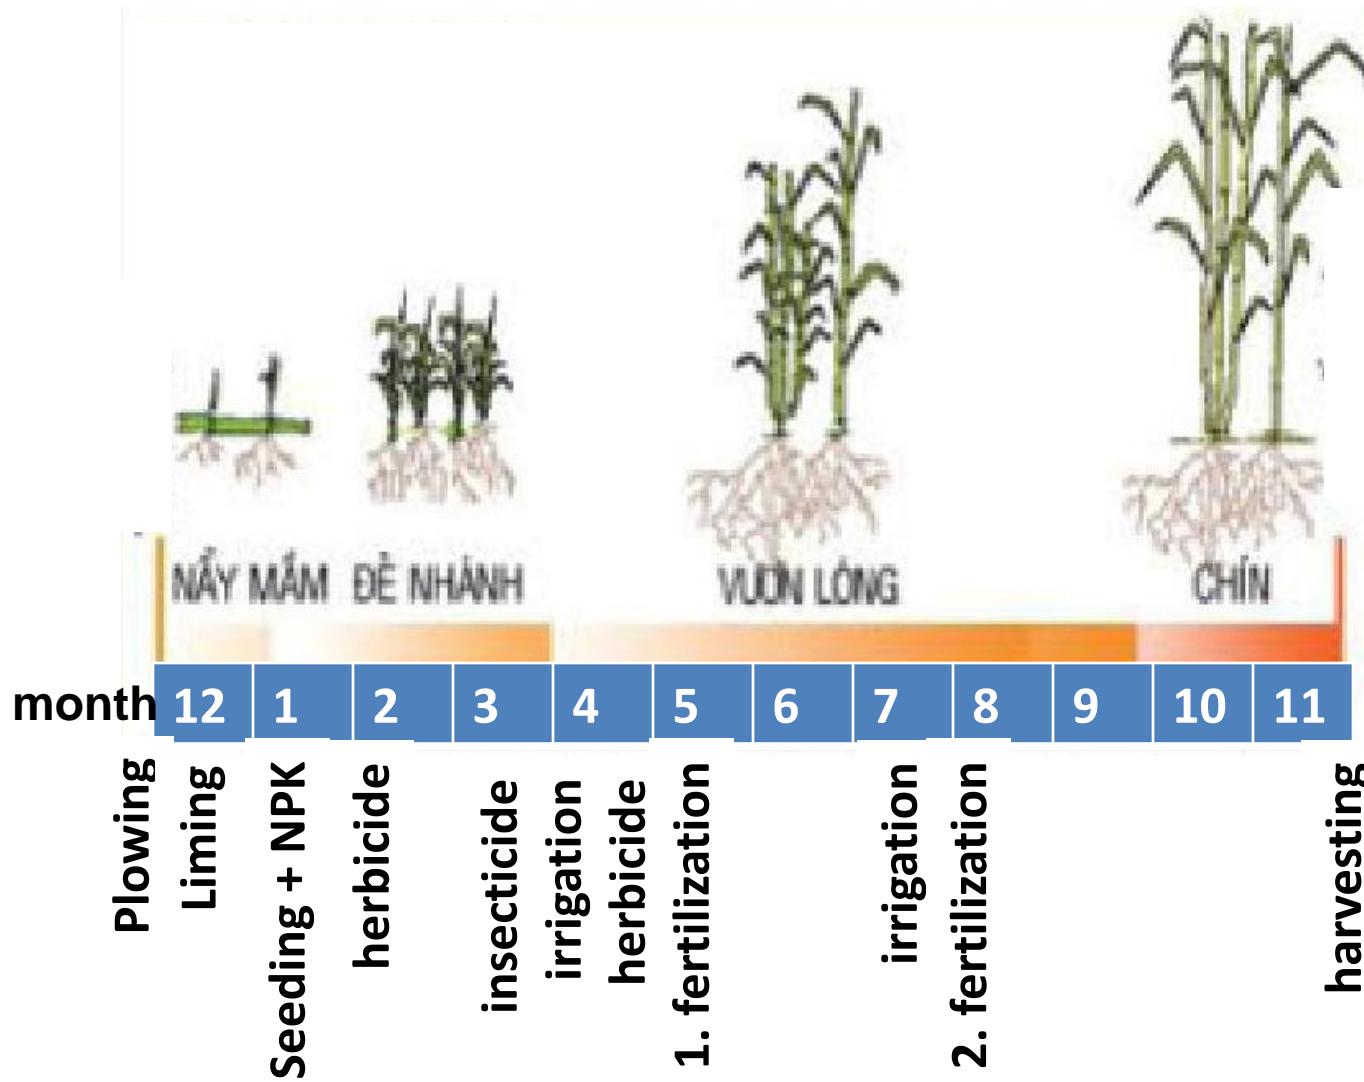

Rotation cycle: 5 years

Sugar cane: 4 years

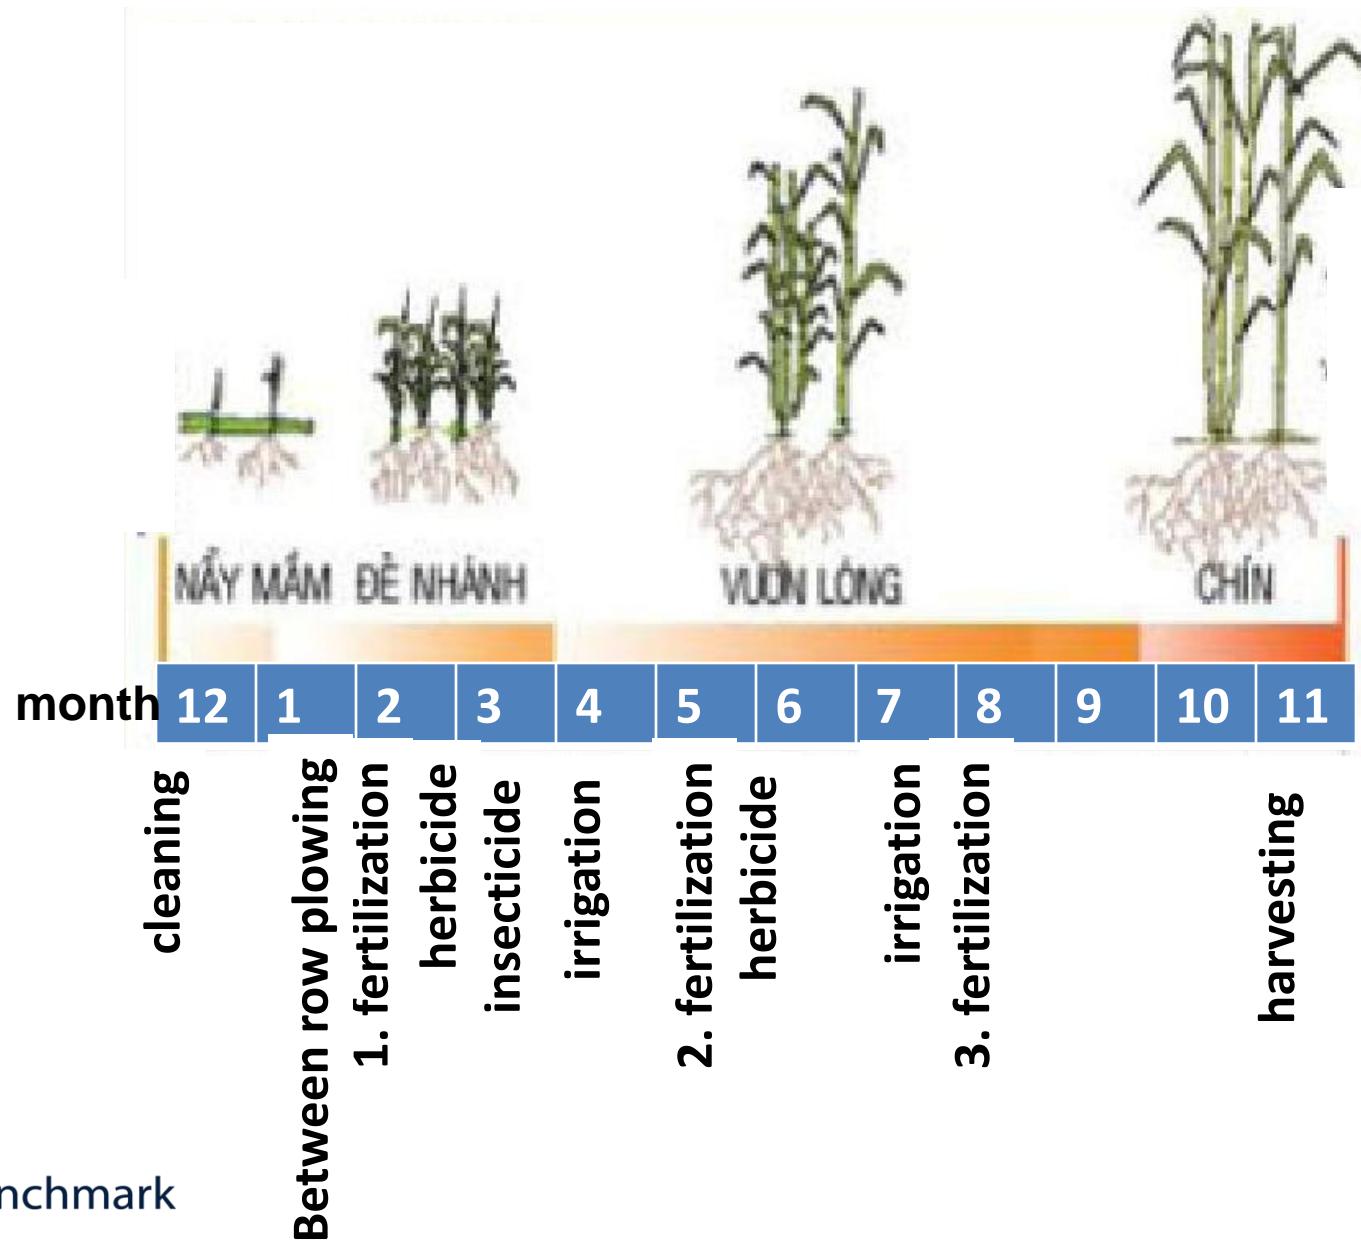

Cassava: 1 year

Establishment year

Ratoon 1, 2, 3

Land preparation + seeding

Deep discing
25 cm – 35 cm

Liming
1 t – 2 t/ha

Cane sludge
20 t – 30 t/ha

Dics-harrow
2-passes

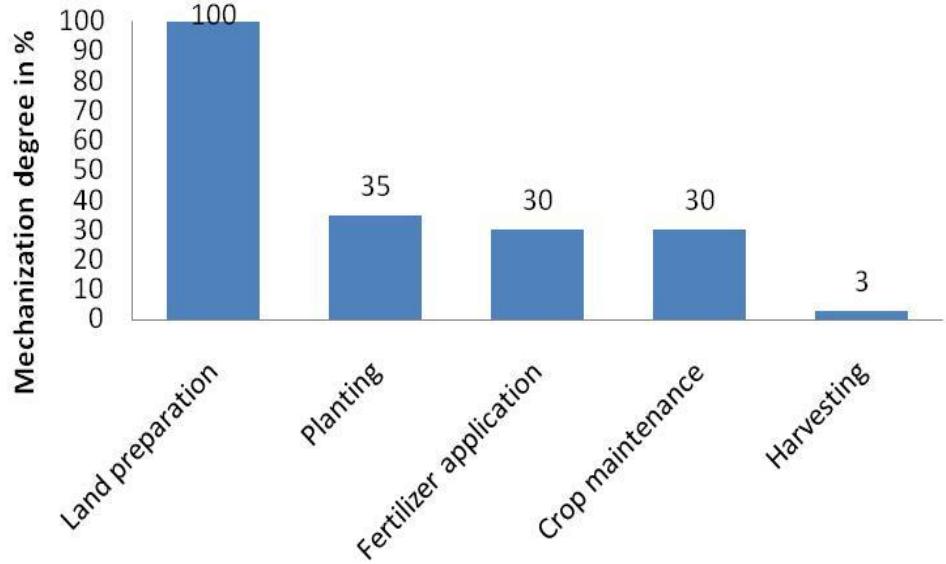

Seed quantity: 10 t cane /ha

Dual row 0,4 m – 1,2 m (1,4 m)

Single row 1 m x 1 m

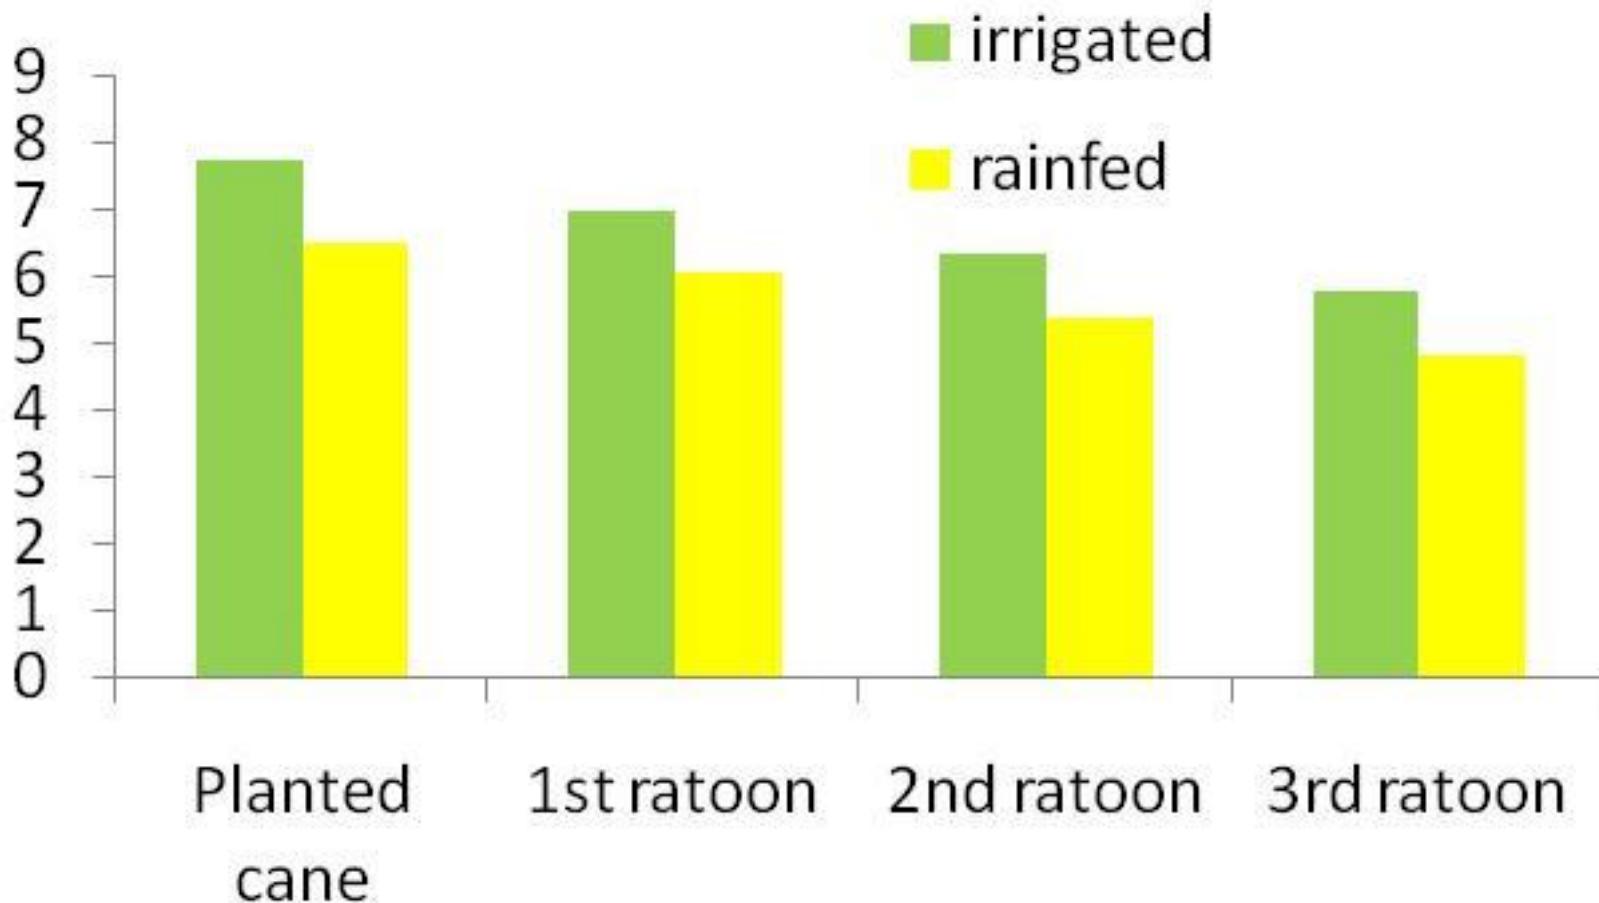

Mechanization

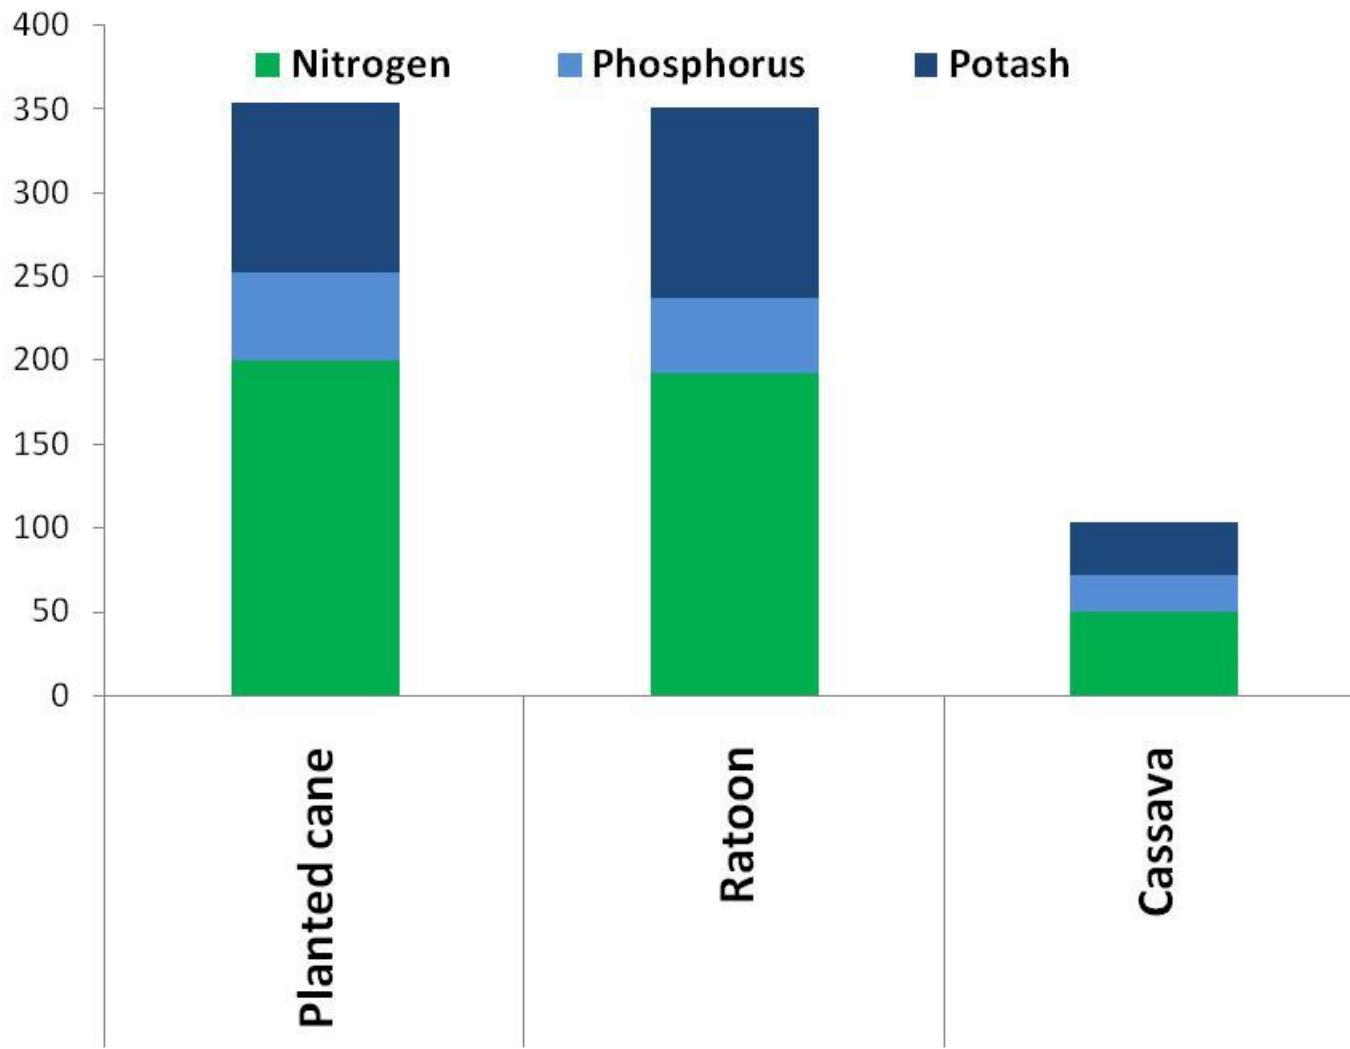

Harvest + transport account
for 35% - 50% of total cost

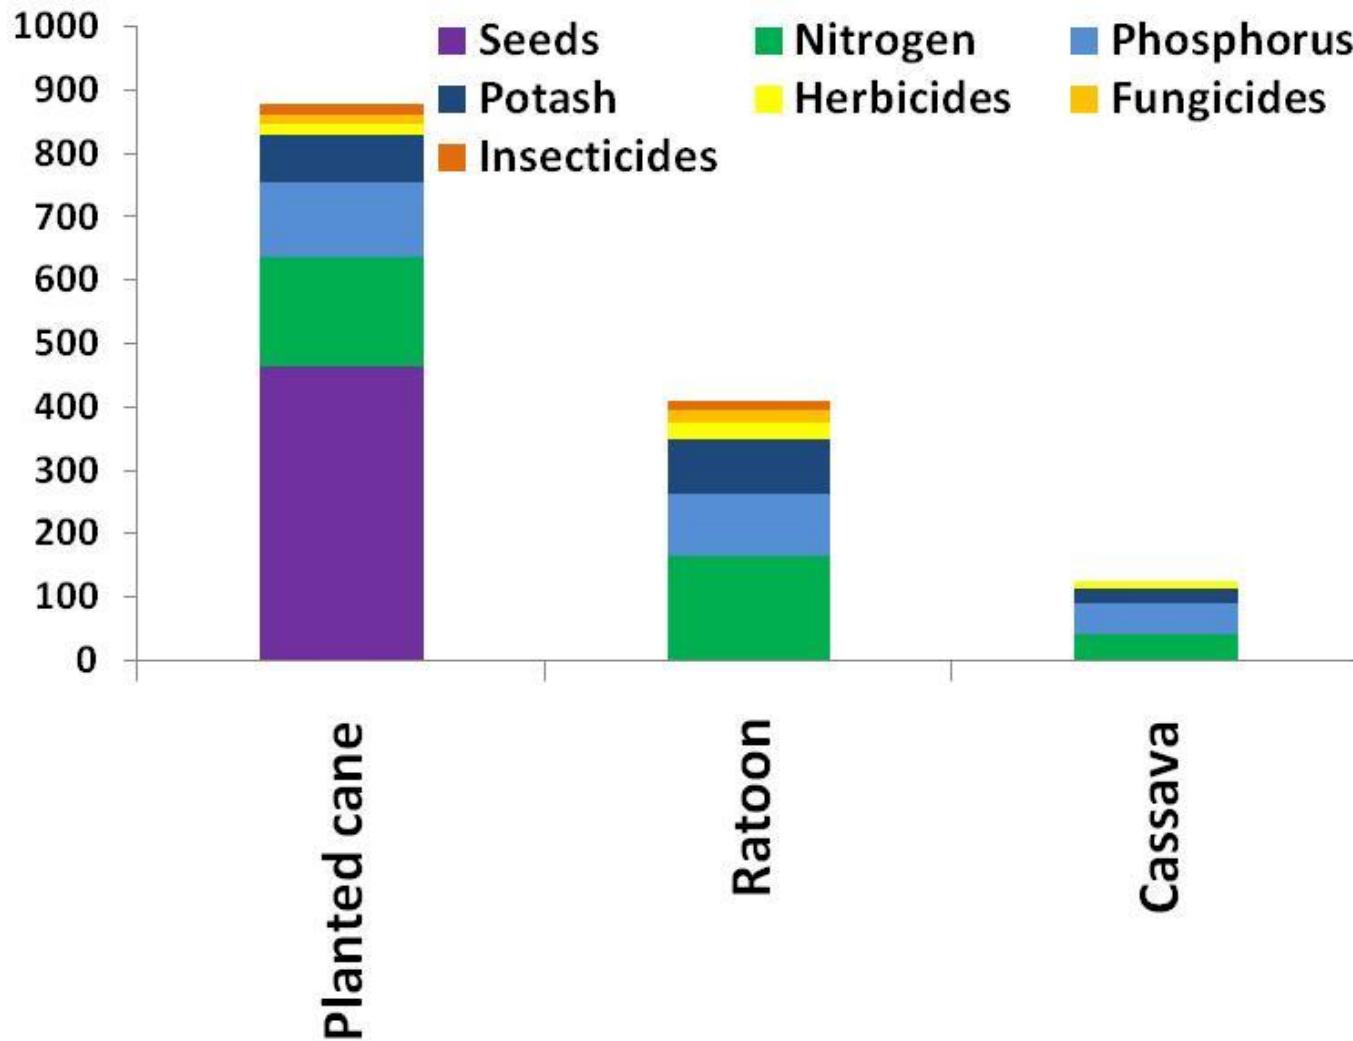

Sugar yield (t/ha) in 2014

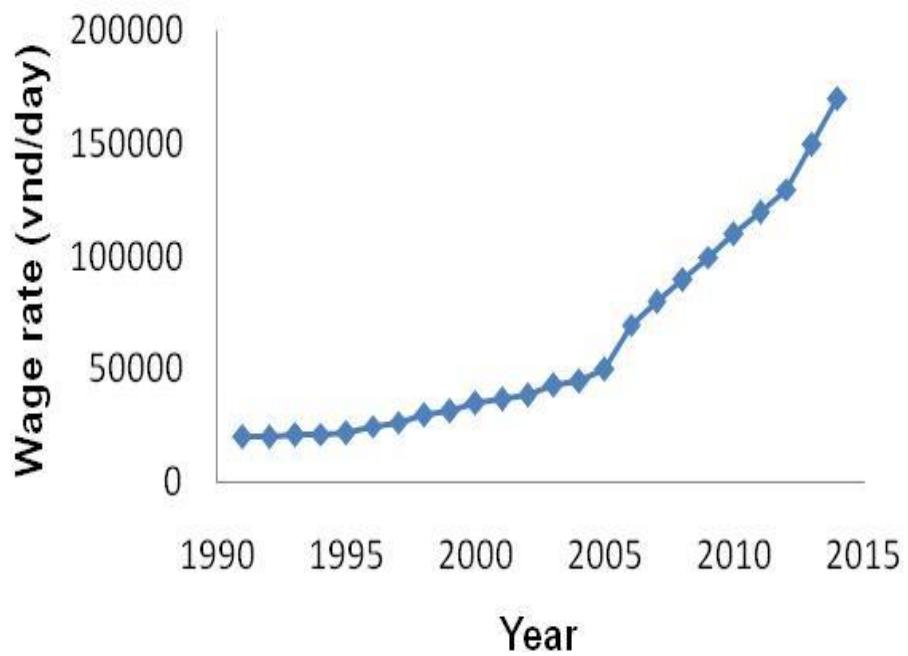

Fertilizer application (kg/ha)

Input cost (USD/ha) in 2014

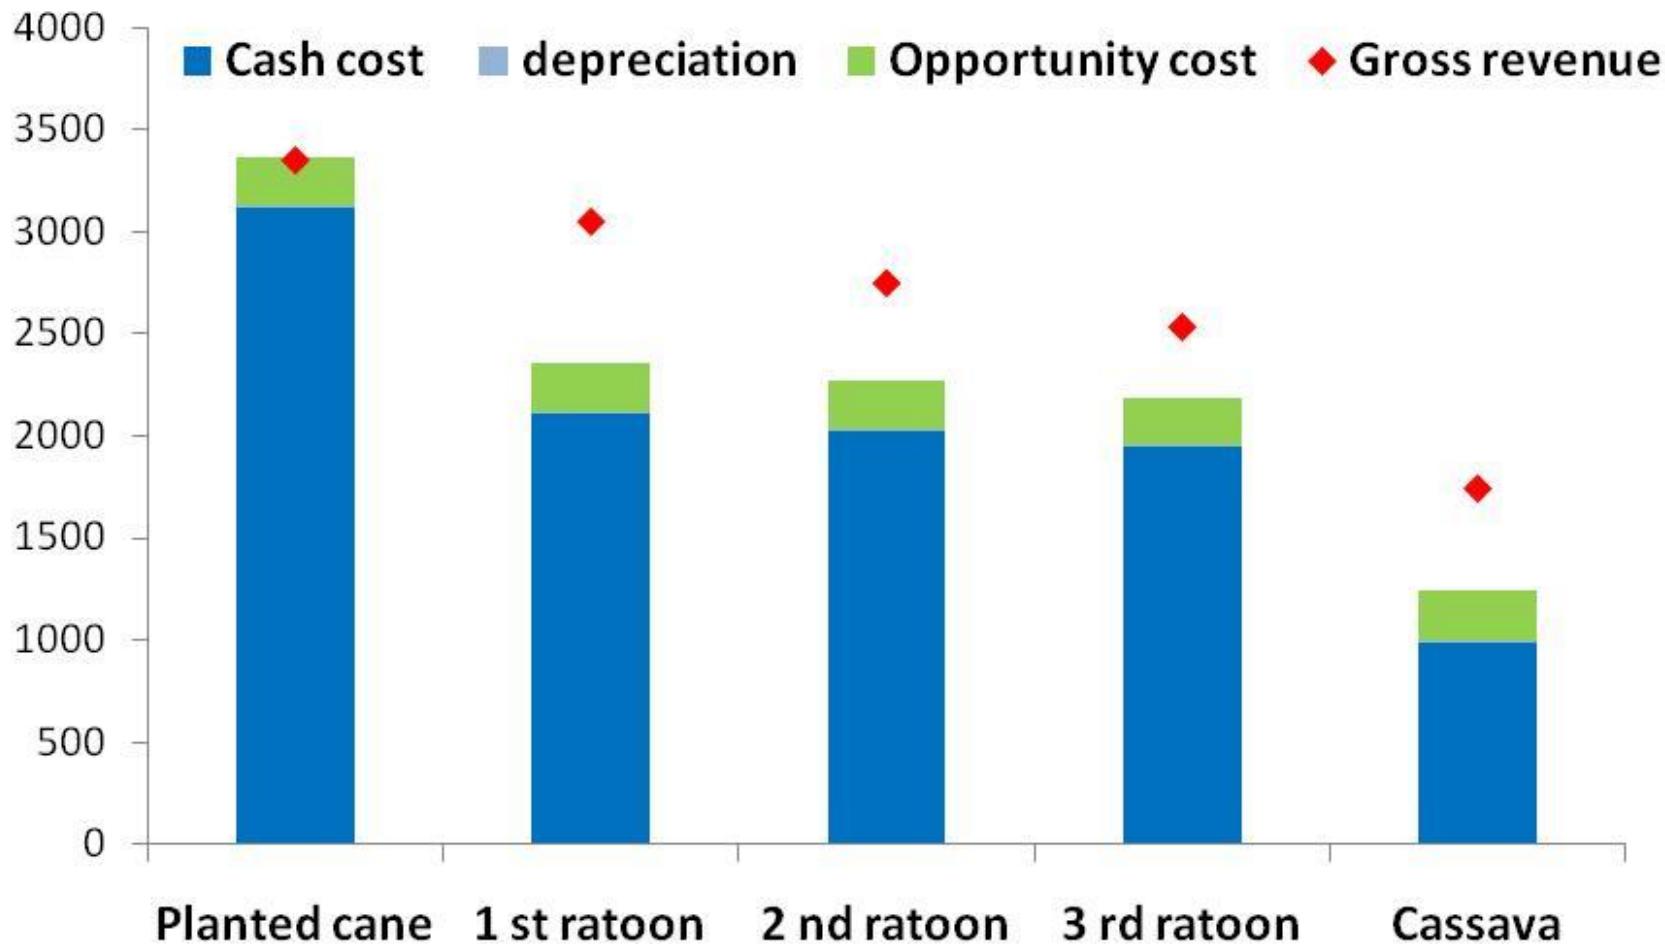

What about labor ?

Labor cost at harvest 12 – 18 USD/t cane

Total cost & gross revenue (USD/ha)

Challenges

- High production cost
- Land consolidation →
- Weather conditions
- Contractual agreements
between farmers and millers
