Dr.-Ing. Ngoc Luan Nguyen,  
Technical consultant, 
SDCC Ltd., Vietnam

Dr.-Ing. Ngoc Luan Nguyen is technical consultant for an independent company, SDCC Ltd. He has been involving mainly in the areas of farming systems of rice, industrial crops as well as energy production from biomass and environmental technologies. He has worked and traveled extensively in Myanmar, Laos, Cambodia and Vietnam. At his current position as project engineer, he also cooperates with German companies in relation to bioenergy and environmental technologies. In addition, he is working closely together with private companies and universities in Vietnam and Germany, especially with DAAD and GIZ, in developing applied research programs and subsequently implementation of processes for bioenergy production and environmental technology in ASEAN countries.

His first study in agronomy was done at University of Agriculture and Forestry in Saigon, Vietnam. His second study in process engineering was completed at Karlsruhe Institute of Technology (KIT) in Germany, where he received Ph. D. in fuel technology.

Vietnam agriculture overview

Agricultural area

- About 10 million ha of total land area of 33.12 million ha are utilized for agricultural purposes
- 62% of cultivable area are occupied by seven major crops including rice, maize, rubber, coffee, cassava, cashew and sugar cane

Rice production in Vietnam

- Vietnam agriculture overview
- Key features of rice production
- Policy on rice production
- Future challenges

Ngoc Luan, Nguyen

Major policy reforms

Land reforms (1981 – 2003): Transform of land and production materials from collective to household system

Land policy: Keep minimum 3.8 million ha of land for paddy production to ensure national food security

Investment: large investment in transport & irrigation system

R & D: Account for 1/3 of the S&T governmental budget investing in agricultural research, extension and information activities. Support hybrid rice for farmers

Support to farmers:
- Setting up floor paddy prices to ensure a minimum profit margin of 30% for rice growers

Development of hybrid rice

<table>
<thead>
<tr>
<th>Year</th>

70% of hybrid rice seeds are imported from China
Price of imported seeds is 4 – 7 times higher than that of domestic seeds

Rice production in Vietnam

- Vietnam agriculture overview
- Key features of rice production
- Policy on rice production
- Future challenges

Ngoc Luan, Nguyen

Critical questions for the future

- Which solution is the best for Vietnam: export-driven or farmer income driven approach (Thai-lesson)?
- How can mechanization and farm consolidation contribute to other social needs, such as increased resource efficiency, environmental sustainability, improved livelihoods for smallholders?
- What role should policy play in the addressing above?

Proportion of farmers by land size used

Urbanization and rural out-migration in Vietnam

Source: esa.un.org/unpp, VN population bureau, IRRI

Rapidly increasing wage rate

2005 – 2012: Wage increases 15%/year

Average inflation rate is 7.4%/year
Trend of rice and meat consumption

- Rice surplus is still to produce after 2020, but decreasing export
- Growing demand of meat ⇒ increasing import of corn, soja etc.

![Graph showing trend of rice and meat consumption](image)

Source: Calculated by the author from FAOSTAT & MARD (Ministry of Agriculture and Rural Development) data

New large rice field model

- Large field enough (from 50 to 500 ha)
- Farmer are voluntary participate
- Linking input dealers and exporters to buy rice from farmers

Source: Pham Van Du, Department of Crop Production, MARD
Recommendations

• maintaining 3 - 3.8 million ha of paddy land
• increasing cultivation of high quality rice (30% - 40%)
• multi-cropping and increasing area for maize, soybean
• using rice for animal feed production

Thank you for your kind interest
